

# LIGHTHOUSE GAME

Go and stand around the tower with your team. You want to survive as long as possible when placing the pawns on the tower. Try to place your pawn on the tower in such a way that your pawn remains standing on the tower, but also try to place your pawn in a way that the next player will get into trouble because the tower will be unstable. Create a difficult situation for your opponents.

We advise you to wear safety helmets. Each player gets an equal number of pawns, which must be placed on the tower. You take turns playing clockwise. You roll the dice to determine on which floor of the tower a pawn should be placed. If you roll the number 4 for instance, you place a pawn on floor number 4.

If less than 10 pawns fall, the player who last placed a pawn must add them all to his stock.

## THE END OF THE GAME

### THE WINNER MAY BE CONGRATULATED WHEN:

- a) If more than 10 pawns fall, the winner is the one who lastly placed a pawn without failing.
- b) If the tower remains standing, the winner is the first player who placed his last pawn.
